

CASE STUDY

Cementing, N2, & Hydraulic Fracturing Support Services
Practical Solutions for our customer in Farmington, NM

Project Highlights

Over the course of 1.5 years, Crown Supply Company provided support services to our client's Cementing, Nitrogen, and Hydraulic Fracturing PSL's. Crown employees worked a combined 66,923 man hours between the fore-mentioned product service lines. Crown provided 10 employees daily to assist with duties such as CDL drivers for equipment mobilization, Rig up/Rig down labor, fluid end maintenance, and equipment operations during Cement jobs and Frac stages.

Advantages:

- Farmington, NM presents a set of unique challenges related to employment, the utilization of Crown Supply Company provided a practical solution that contributed to our client's success in obtaining their current market share
- Crown Supply Company provides full administration, management, scheduling, in house safety training, and internally handles any employee issues for all of their crews which resulted in minimal disruption to our customer
- Our client could focus their energy on running their operations and not on hiring and training employees
- In addition to operating Cement, Nitrogen, and Fracturing equipment, Crown employees performed routine and preventative maintenance on fluid ends between stages, which resulted in less operational downtime
